

BUILDING THE INTERNET OF AI

WHAT IS HYPERCYCLE?

HyperCycle interconnects AI machines to increase their intelligence and profitability.

HyperCycle enables AI systems to communicate and collaborate efficiently. Currently, this process is slow and costly.

HyperCycle improves this by offering a secure global connection system with verifiable identities, without depending on centralized parties.

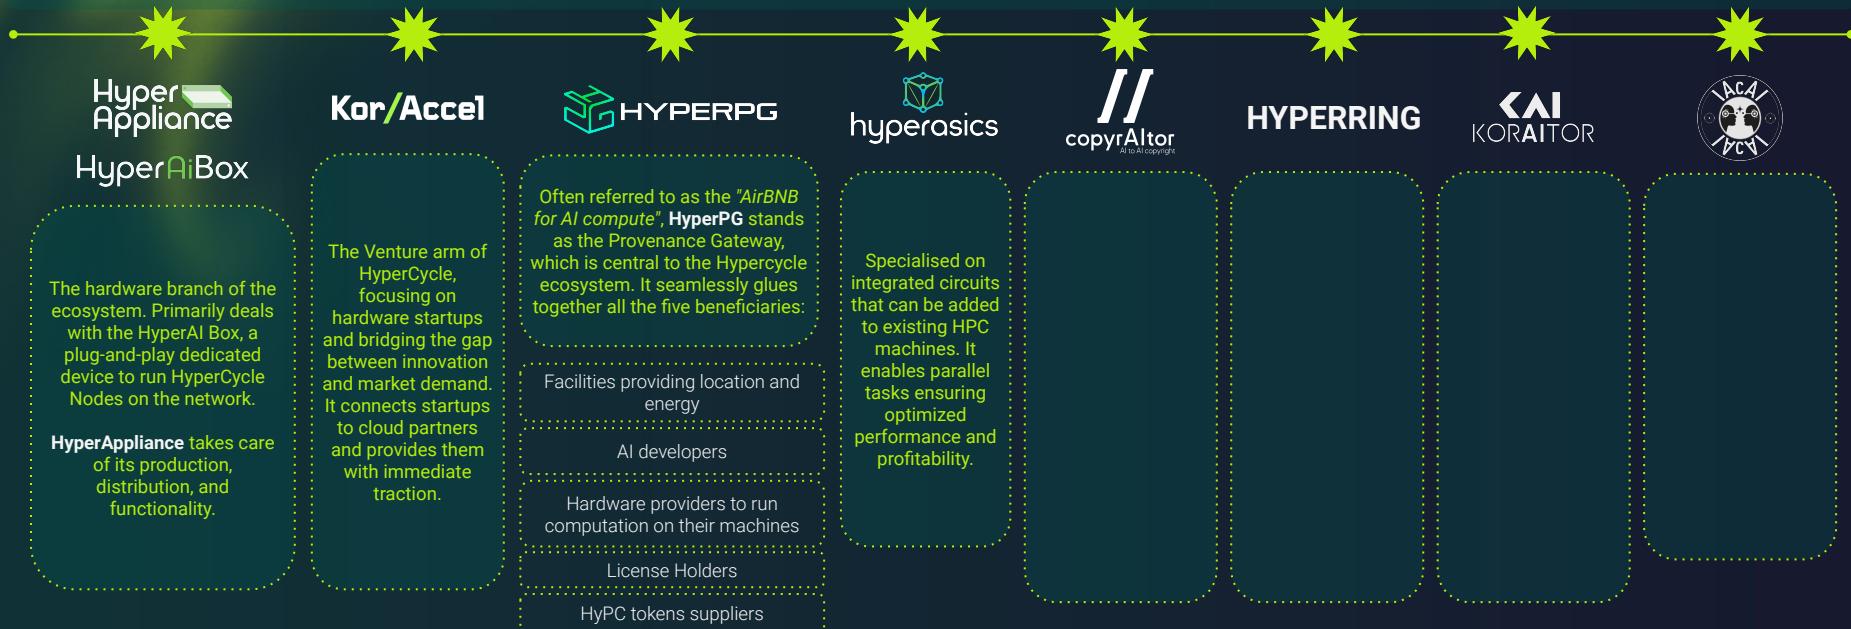

HyperCycle provides a safe platform for AI to interact directly without intermediaries.

HyperCycle Ecosystem

HyperCycle acts as the enabler in the ecosystem. It enables AI systems to communicate and collaborate efficiently. In the current landscape, this process is often slow and costly.

HyperCycle addresses these challenges by offering a secure global connection system with verifiable identities, eliminating the need for centralised parties. It provides a safe platform for AI to interact directly without intermediaries.

HyperPG ensures that these beneficiaries work in harmony, optimising the overall functionality of the HyperCycle Network.

WHAT IS HYPERCYCLE?

HyperCycle is the '**Internet of AI**'. It interconnects AI machines to increase their intelligence and profitability.

WHAT IS UNIQUE ABOUT HYPERCYCLE?

			
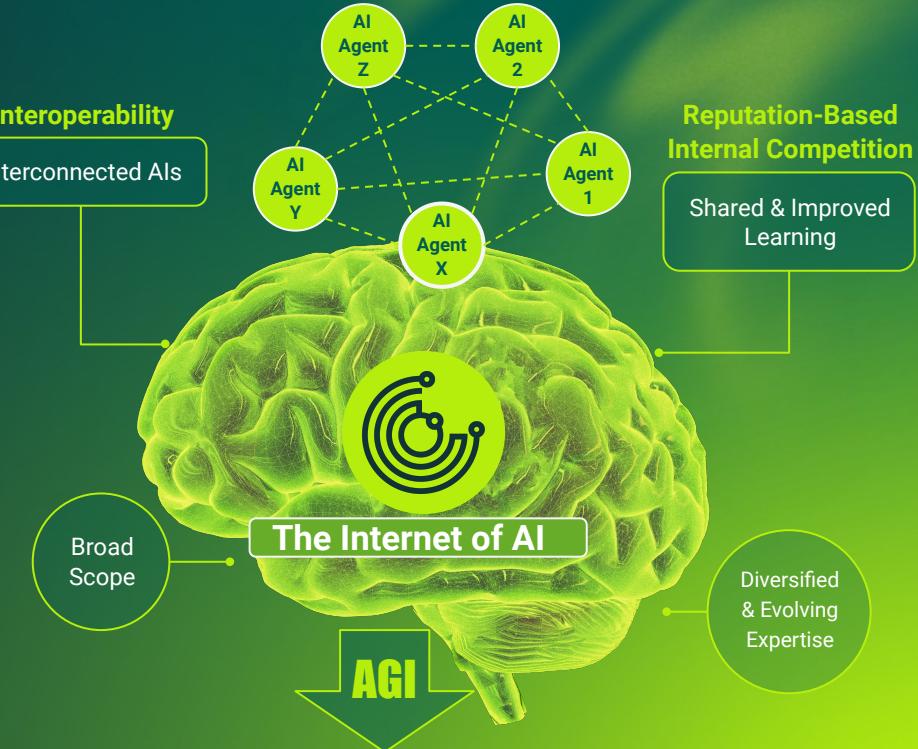

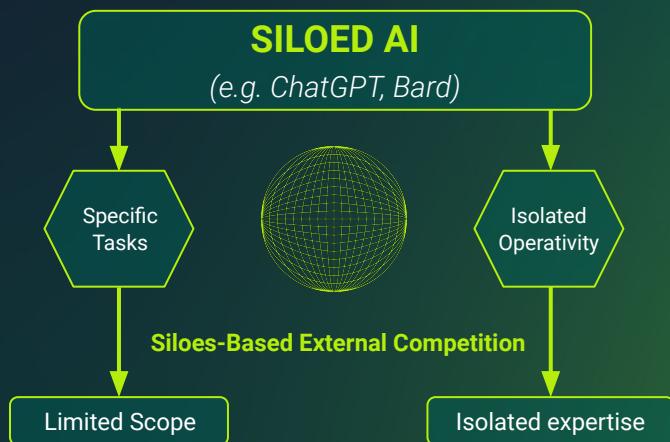

Revolutionary Design and Capabilities	Decentralized Structure	Reputation & Incentives	Frictionless environment for AI transactions
Rather than maintaining AI in silos, HyperCycle decentralizes interconnection between AI Agents, mirroring the function of neurons in a brain.	Allows the execution of interoperable AI within sub-seconds, vastly outpacing traditional models.	Rewards are paid in stablecoins and HyPC to incentivize participants to maintain their nodes' efficiency on the network.	The HyperCycle network ensures robust security and supports the scaling needs of growing businesses and industries.

WHAT IS UNIQUE ABOUT HYPERCYCLE?

By enabling AI systems to **communicate and collaborate** more efficiently and securely, HyperCycle can help AI systems to learn and grow quicker. It makes businesses in need of AI computing **more efficient and profitable**, and accelerates the development of Artificial General Intelligence (AGI).

WHY PARTAKE IN THE AI COMPUTATION ECONOMY NOW?

1

As opposed to mining, HyperCycle transforms **electricity** directly into **Intelligence**. This transformation is more efficient and profitable because it taps into a useful, emerging economy with a lot of demand: the **AI Computation Economy**.

2

By establishing your node's reputation now, with consistent uptime in our robust network, you gain an **edge over latecomers**. Higher reputation means more confidence from clients, more work received, and more revenue generated.

3

By 2026, it's estimated that over 90% of transactions will involve **machine-to-machine** communication. By joining the HyperCycle network, you can partake in this emerging Economy right now.

4

HyperCycle is **leading the AI Computation trend**, with over 290,000 nodes already sold and contributing to the network's formidable strength.

HOW CAN I START GENERATING REVENUE ON HYPERCYCLE NOW?

For B2B Enterprise-Grade Companies

50%

You can acquire a full masternode License (512 single nodes instances) and HyPC on [Nodemarket.io](#)

For B2C Individuals

75%

You can acquire single node Licenses and start running via our [Official Distributor](#).

*Precommand our dedicated [HyperAiBox](#) by filling [this form](#).

If you lack any of the required components

100%

Don't fret! You can visit our one-stop-shop platform and borrow your missing component on [HyperPG.com](#)

To run Hypercycle Nodes (HCNs) you need:

- + Node Licenses (Masternodes or singles)
- + 1024 HyPC tokens/Node
- + Compatible Hardware*

THE FUTURE OF AI COMPUTATION IS HERE WITH HYPERCYCLE.

ARE YOU READY TO SEIZE THE OPPORTUNITY?

JOIN US NOW!

hyperpg.com

WHAT IS HYPERPG?

HyperPG is a dynamic collaboration between HyperCycle and Penguin Group.

HyperCycle

HyperCycle is the 'Internet of AI'. Powered by a Layer 0++ blockchain technology, it enables rapid, cost-effective microtransactions between diverse AI agents interconnected to each other, and collectively solving problems.

This unique design provides an unprecedented efficient AI model leading us towards the emergence of Artificial General Intelligence (AGI).

Penguin

Penguin Group is a company that leverages Paraguay's green, hydroelectric power to run High-Performance Computing (HPC) data centers.

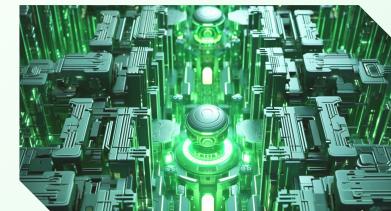

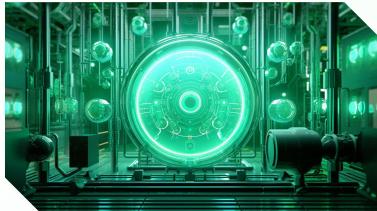

By doing so, they convert energy output into human potential, sponsoring a global talent pool of software engineers, data analysts, and students to tackle large-scale challenges.

HyperPG symbolizes the **union of two vital forces**, offering a service that forges a connection between hardware providers and consumers, while leveraging affordable, green energy to drive unprecedented efficiency in AI computation.

WHAT DOES HYPERPG OFFER?

Serving as the comprehensive hub, **HyperPG** brings all five beneficiaries together under one roof, ensuring everyone can find their missing component and participate in the AI computation economy on the **HyperCycle Network**.

HyPC Token Suppliers

Activate node licenses by releasing native HyPC tokens into the Network.

License Owners

Enable hardware operations by enabling the AI Marriage with HyPC tokens.

Hardware Owners

Contribute computational power to the HyperCycle Network.

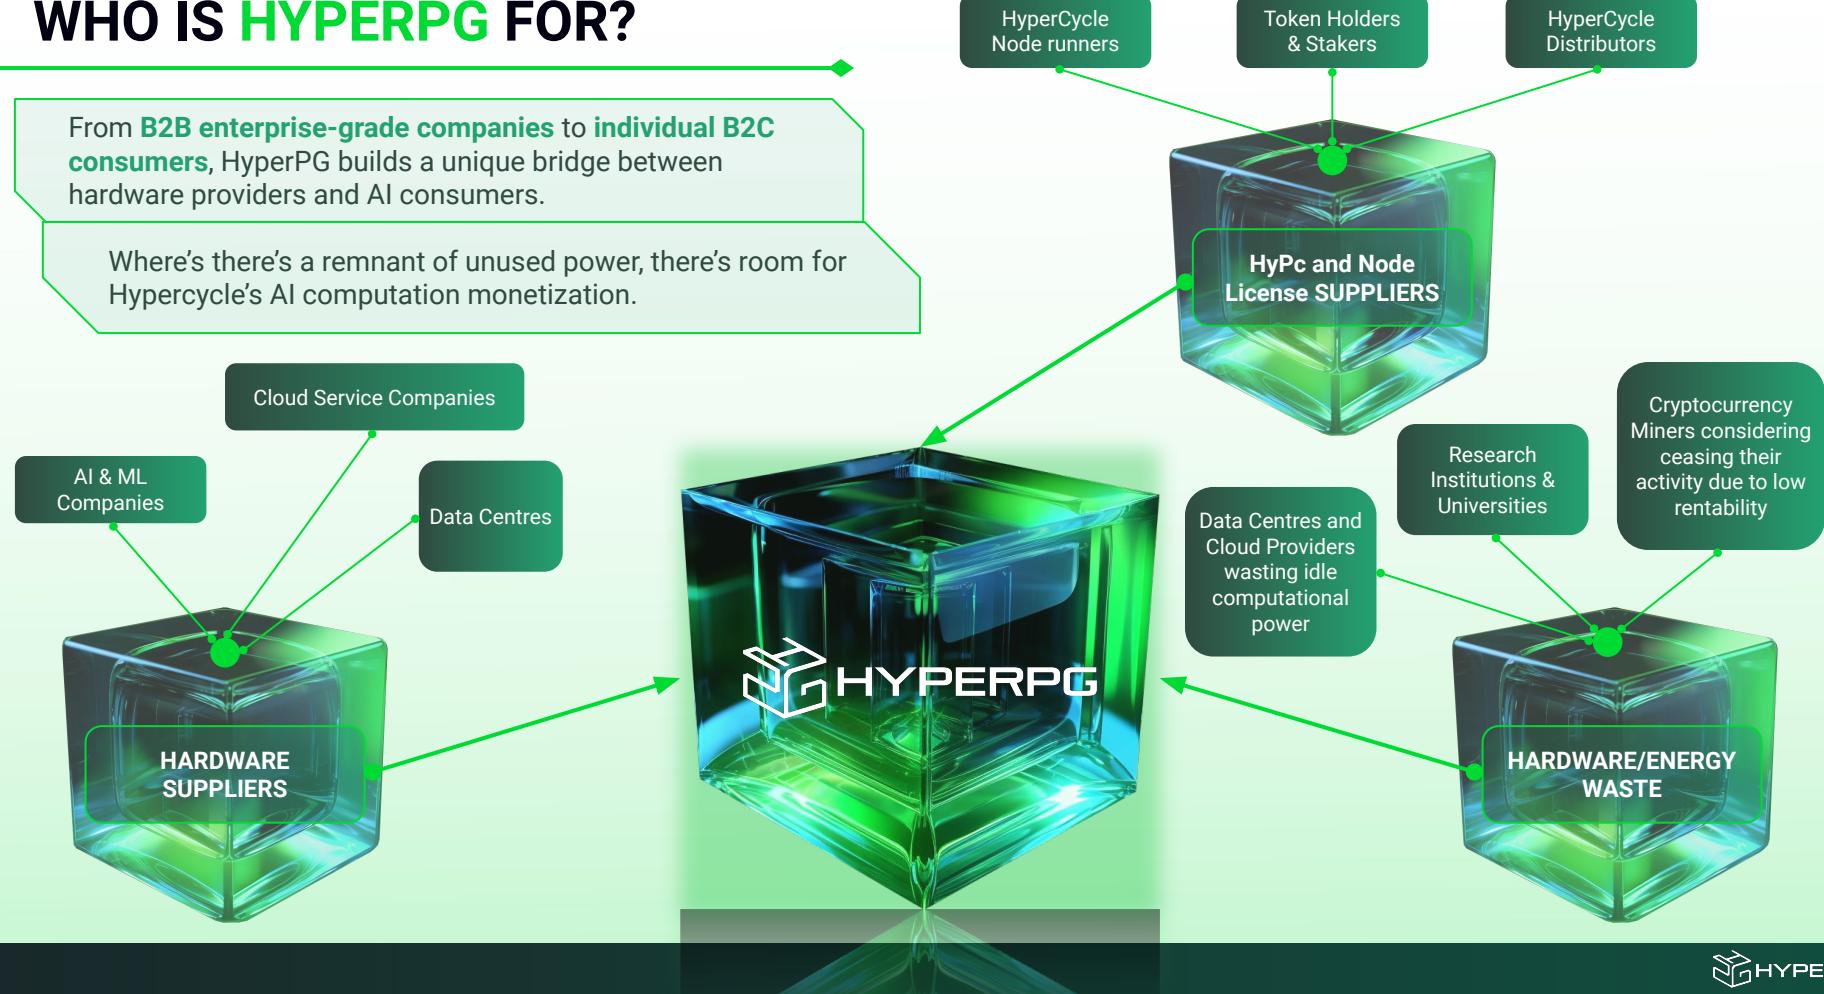

Facilities

Offer Energy and Space within their infrastructures.

AI Developers

Build on AI machines and earn royalties

WHO IS HYPERPG FOR?

WHAT CAN YOU DO WITH HYPERPG?

HyperPG is your one-stop-shop to run Hypercycle Computation Nodes (HCN) and tap into the most exciting market for years to come: **the AI computation Economy**.

HYPERCYCLE AI COMPUTATION NODES

MONETIZING HARDWARE WITH HYPERPG: HARDWARE SUPPLIERS

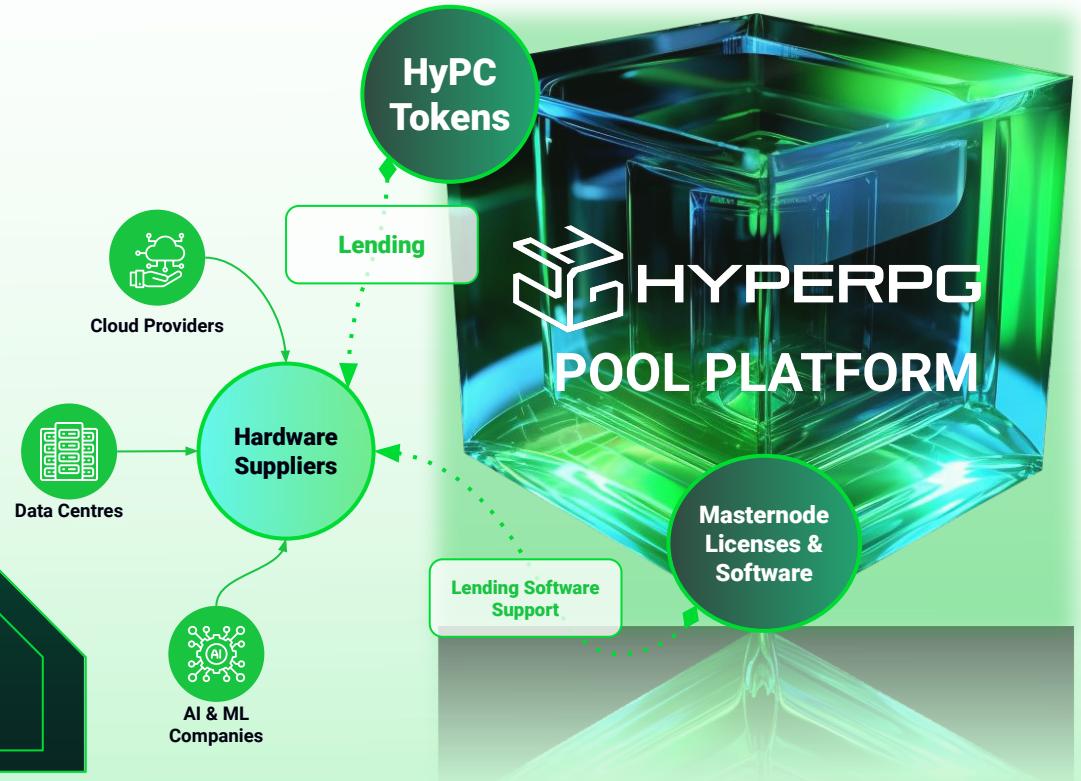

Cloud Service providers

Data Centres

AI and ML companies

For clients with adequate in-house HPC hardware, HyperPG can provide HyPC Tokens Masternode Licenses and software support, enabling them to monetise their machines on the HyperCycle network.

If they don't possess sufficient HyPC tokens and/or Node Licenses, these can be borrowed from the HyperPG Pool Platform, requiring no upfront investment.

WHAT IS HyperAIBox by HyperAppliance?

HyperAiBox

POWER - CONNECT - COMPUTE

HyperAIBox is a plug-and-play device that is specifically designed for AI computing on the HyperCycle Network.

HyperAppliance's VISION

To **empower** individuals with *in-home data storage, machine learning, and AI computation, reducing reliance on global corporations!*

THE DEVICE

Compact: It's no larger than your average internet box and comes with an integrated touchscreen for one-finger operation.

Optimized: With pre-installed software, you can run your nodes directly from home. Simply plug it in, connect your wallet, attach your node license, and start running.

Low Power Consumption: It draws an average of 20W of power.

HyperAiBox

Powerful: For our sample batch, we're currently shipping one version with a 4-core CPU, two versions with 8-core CPUs, two GPU and two storage options.

ADVANTAGES OF OWNING A HyperAIBox

Passive:

The box is designed to autonomously handle tasks. Simply set it up and relax, while retaining full access to your other devices, such as desktops, laptops, tablets, and smartphones.

Direct support:

Benefit from direct updates and support from the HyperCycle engineers, ensuring your software operates at peak performance.

Better revenue share:

Owning a HyperAi Box allows you to potentially consolidate hardware, HyPC tokens, Node licenses, and energy all in one place. This setup enables you to capture a larger portion of the revenue share that is split between all the beneficiaries.

High Cost-Efficiency ratio:

The device is purpose-built to run HyperCycle Nodes on optimised hardware. No superfluous components, low power consumption, and minimum energy waste.

Various versions for various usages:

XR1: Storage-oriented, can be transformed into a local storage service on the Network for AI developers willing to train their AIMs.

XR2: Suitable for providing AI Computation for HyperCycle Nodes on the Network.

WHY USE HyperAIBox

Choosing decentralisation over centralisation for AI:

Most AI computation is centralised in major clouds; HyperAIBox is here to decentralise it to regional and local levels.

Community Empowerment:

Empowering individuals with in-home data storage, machine learning, and AI computation, reducing reliance on global corporations.

Bridging AI from home:

Bringing AI computation directly to households for local challenges.
